EXPERIENCE

CAPGEMINI

Apr 2021 – Present

Associate Consultant (Data Scientist)

Dec 2023 – Present

- Developed and deployed end-to-end **ML pipelines** for text analytics, including data ingestion, preprocessing, model training, and production-grade inference.
- Implemented a **Mailbox AI** solution for email classification based on textual content, enabling automated ticket creation and intelligent assignment to the appropriate support teams
- Built a ServiceNow **ticket classification** system using Machine Learning, Deep Learning, and NLP to categorize tickets into categories and sub-categories with automated bot mapping.
- Automated deployment workflows using CI/CD pipelines, Docker, and MLOps best practices, enabling scalable, reproducible releases with integrated monitoring and model versioning.
- Delivered scalable ML solutions using AWS and GCP platform, selecting infrastructure based on cost efficiency, model latency, and deployment requirements.
- Migrated on-premises solution to AWS platform, used Docker Image on ECR, Docker-compose on EC2, S3 Bucket, Event Bridge, DynamoDB, CloudWatch etc.
- Implemented an **Email Auto-Response** solution using GenAI and RAG to classify emails, log ITSM tickets, and generate automated **first-level** response.
- **Collaborated cross-functionally** with data engineers, product manager, and business stakeholders to align AI/ML solution with real-world use cases, streamline integration, and drive continuous improvement through feedback loops.

Senior Software Engineer (Data Scientist)

June 2022 - Dec 2023

- Designed and deployed end-to-end AI/ML solutions for **Ticket classification** using Python, ML, Deep Learning, NLP, SQL, FastAPI, ML framework.
- Applied both **unsupervised methods** including **LDA** and **BERTopic** for topic modeling on unstructured text data to prepare labeled data for classification.
- Built scalable ML pipelines for data preprocessing, feature engineering, model training, deployment, evaluation, and monitoring on AWS using SageMaker, Lambda, S3, Step Functions, AWS Glue, and CloudWatch.
- Collaborated with cross-functional teams and mentored junior engineers on NLP deployment best practices.

Software Engineer

Apr 2021 - June 2022

- Extracted and transformed large-scale datasets from **AWS RedShift** using **SQL** and **Python Libraries** to support analytics workflows and business reporting.
- Designed and maintained **Power BI dashboards** to visualize KPIs, user trends, and system performance for data-driven decision-making.
- Automated recurring reporting tasks using reusable **ETL scripts**, improving efficiency and reducing manual overhead.
- Worked closely with product managers, and cross-functional teams to define metrics, ensure data accuracy, and present insights through clear storytelling.

PROJECTS

Smart FAQ Chatbot

HuggingFace Embeddings, LLM, FastAPI, Streamlit, FAISS

- Developed an intelligent FAQ chatbot using Gemini LLM embeddings and FAISS-based semantic vector search over a knowledge base.
- Built a scalable backend with FastAPI (deployed via Render) and an interactive Streamlit frontend (Streamlit Cloud), enabling natural language Q&A.
- Implemented CI/CD with GitHub Actions for automated backend deployment and ensured secure, efficient system architecture.

NINA IT Assistant Agent

Google ADK, Vertex AI, Agentspace, LangChain, Gemini, Buckets, ITSM

- Built **Nina**, an AI-powered ITSM assistant that automates ticket triage, incident analysis, and knowledge base suggestions using LLMs and RAG.
- Integrated with **ServiceNow** via custom Python utilities for real-time incident monitoring and resolution assignment, deployed scripts and a centralized agent.
- Implemented a **CI/CD pipeline** with GitHub Actions and Dockerized deployment, enabling scalable and secure automation workflows for IT service operations.

Service Ticket Dashboard

SQL, Power BI, Python

- Developed an interactive dashboard to monitor service ticket trends, KPIs, and resolution metrics, empowering operational teams with data-driven insights.
- Automated data extraction and transformation from structured sources using SQL and Python, delivering accurate insights with reduced manual effort.
- Implemented dynamic filters, drill-down capabilities, and role-based access in Power BI to tailor insights for business and support stakeholders.

EDUCATION

LAKSHMI NARAIN COLLEGE OF TECHNOLOGY

Bhopal, Madhya Pradesh

- B.E. in Electronics and Communication Engineering
CGPA: 8.19/10

June 2016 - June 2020

SKILLS

GenAI & Agentic AI: LLMs, RAG, LangChain, Vector databases (FAISS, ChromaDB), Embedding models, LangGraph, Finetune LLMs, Prompt Engineering

Deep Learning & NLP: Transformer, LSTM, BERT, CNN, NER, Text Classification, BERTopic

AI & Machine Learning: Classification, Regression, Clustering, Naïve Bayes, SVM, Topic Modeling, Feature Engineering

Programming Languages & Frameworks: Python, SQL, TensorFlow, NLTK, FastAPI, Streamlit

Cloud Platform & Deployment: AWS, GCP, Docker, GitHub Actions, CI/CD

Data Visualization & BI Tools: Power BI, Matplotlib, Seaborn

Soft Skills: Problem Solving, Data Storytelling, Team Collaboration, Leadership, Mentorship, Agile Workflow

ACCOMPLISHMENTS

- **Top 9 Finalist** in Google Cloud Agentic AI Hackathon 2025 for building a multi agent IT assistant using LLMs for task automation.
- Delivered a webinar on **Email Classifier & Ticket Classification** attended by 500+ professionals, promoting knowledge sharing across teams.
- Published multiple blogs on **Medium** covering Data Science, Machine Learning, & AI contributing to the community and knowledge sharing.
