CAPGEMINI

Apr 2021 – Mar 2026

Associate Consultant (AI/ML Engineer)

Dec 2023 – Mar 2026

- Developed and deployed end-to-end **ML pipelines** for text analytics, including data ingestion, preprocessing, model training, and production-grade inference.
- Implemented a **Mailbox AI** solution for email classification based on textual content, enabling automated ticket creation and intelligent assignment to the appropriate support teams
- Deployed a ServiceNow **ticket classification** system using Machine Learning, Deep Learning, and NLP to categorize tickets into categories and sub-categories with automated bot mapping.
- Migrated on-premises solution to AWS platform, used Docker Image on ECR, Docker-compose on EC2, S3 Bucket, Event Bridge, DynamoDB, CloudWatch etc.
- Implemented and tested an **Email Auto-Response solution** using **GenAI and RAG** to classify emails, log tickets, and generate automated **first-level responses**.
- Collaborated cross-functionally** with data engineers, product manager, and business stakeholders to align AI/ML solution with real-world use cases, streamline integration, and drive continuous improvement through feedback loops.

Senior Software Engineer (AI/ML Engineer)

June 2022 - Dec 2023

- Deployed end-to-end AI/ML solutions **on-premises server** for **Ticket classification** using Python, ML, Deep Learning, NLP, SQL, FastAPI, ML framework.
- Applied **unsupervised methods** including **LDA** for topic modeling on unstructured text data to prepare Labels for further classification.
- Built ML pipelines for data preprocessing, feature engineering, model training, deployment, evaluation, and monitoring on AWS using SageMaker, Lambda, S3, Step Functions, AWS Glue, and CloudWatch.
- Collaborated with cross-functional teams and mentored junior engineers on NLP deployment best practices.

Software Engineer

Apr 2021 - June 2022

- Managed and monitored 800+ enterprise servers and 15K+ VDIs within Citrix environments to ensure high availability, performance, and operational reliability.
- Administered Citrix applications and virtual desktops, including user access provisioning, troubleshooting, and infrastructure support for global enterprise users
- Handled Incident and Change Management activities in compliance with ITIL processes to ensure seamless operations and timely issue resolution.
- Collaborated closely with manager and Latin American clients to maintain infrastructure performance, resolve technical issues, and deliver end-user support.

PROJECTS

Smart FAQ Chatbot

HuggingFace Embeddings, LLM, FastAPI, Streamlit, FAISS

- Developed an intelligent FAQ chatbot using Gemini LLM embeddings and FAISS-based semantic vector search over a knowledge base.
- Built a backend with FastAPI (deployed via Render) and an interactive Streamlit frontend (Streamlit Cloud), enabling natural language Q&A.
- Implemented CI/CD with GitHub Actions for automated backend deployment and ensured secure, efficient system architecture.

NINA IT Assistant Agent

Google ADK, Agentspace, LangChain, Gemini, Buckets, ITSM

- Built **Nina**, an AI-powered ITSM assistant that automates ticket triage, incident analysis, and knowledge base suggestions using LLMs and RAG.
- Integrated with **ServiceNow** via custom Python utilities for real-time incident monitoring and resolution assignment, deployed scripts and a centralized agent.
- Implemented a **CI/CD pipeline** with GitHub Actions and Dockerized deployment, enabling scalable and secure automation workflows for IT service operations.

Email Classifier

Python, Pandas, NLP, LSTM, ITSM

- Developed an **Email Classification system** using NLP and an LSTM model to automatically classify incoming emails into predefined categories and route them to the appropriate Outlook folders.
- Integrated **ServiceNow APIs** to automatically create and route tickets to the appropriate assignment groups based on the classified email category.
- Deployed the solution on an **on-premises server**, reducing manual effort for the service desk team by automating email classification and ticket routing.

EDUCATION

LAKSHMI NARAIN COLLEGE OF TECHNOLOGY

Bhopal, Madhya Pradesh

- B.E. in Electronics and Communication Engineering
CGPA: 8.19/10

June 2016 - June 2020

SKILLS

GenAI & Agentic AI: LLMs, RAG, LangChain, Vector databases (FAISS, ChromaDB), Embedding models, LangGraph, Finetune LLMs, Prompt Engineering

Deep Learning & NLP: Transformer, LSTM, CNN, Text Classification

AI & Machine Learning: Data Science, Classification, Regression, Clustering, Naïve Bayes, SVM, Topic Modeling, Feature Engineering

Programming Languages & Frameworks: Python, SQL, TensorFlow, NLTK, FastAPI, Streamlit

Cloud Platform & Deployment: AWS, GCP, Docker, GitHub Actions, CI/CD, Kubernetes

Data Visualization & BI Tools: Power BI, Matplotlib, Seaborn

Soft Skills: Problem Solving, Data Storytelling, Team Collaboration, Leadership, Mentorship, Agile Workflow

ACCOMPLISHMENTS

- Top 9 Finalist** in Google Cloud Agentic AI Hackathon 2025 for building a multi agent IT assistant using LLMs for task automation.
- Delivered a webinar on **Email Classifier & Ticket Classification** attended by 500+ professionals, promoting knowledge sharing across teams.
- Published multiple blogs on **Medium** covering Data Science, Machine Learning, & AI contributing to the community and knowledge sharing.
